

Centralized Mail Delivery Residential Applications

Another Concept in Delivery Service

Centralized Mail Delivery Residential Applications

Centralized Mail Delivery provides delivery and collection services to a number of residences from a centrally located installation.

Benefits to developers, builders, and owners who use Centralized Mail Delivery installations, such as the ones depicted, include:

Increased Security

Centralized Mail Delivery installations provide a greater degree of protection against mail theft and mailbox vandalism than unlocked mailboxes.

Other Advantages

Customer compartments in Centralized Mail Delivery equipment are large enough to accommodate several days' accumulation of mail, eliminating the need to have mail held at the Post Office™ during short periods away from home. Centralized Mail Delivery installations can also reduce risks to letter carriers from common hazards such as unleashed dogs and poorly maintained sidewalks.

Centralized Installations

Neighborhood Delivery Centers

A Neighborhood Delivery Center is a free-standing, sheltered or enclosed installation containing a large number of individually locked, wall-mounted mailboxes.

Cluster Box Units

A cluster box unit (CBU) is a free-standing, pedestal-mounted mailbox containing 8, 12, 13, or 16 individually locked mailboxes and parcel compartments. Installations can be modified to blend with any community decor. Customized installations are depicted to the right.

We recommend that developers and builders plan for basic or customized Centralized Mail Delivery installations for residential communities during a project's design phase. However, the Postal Service™ is willing to work with developers, builders, and owners at any stage of development.

For more information on Centralized Mail Delivery, contact your local Post Office.
